

Group no: 14

Vulnerability Type:

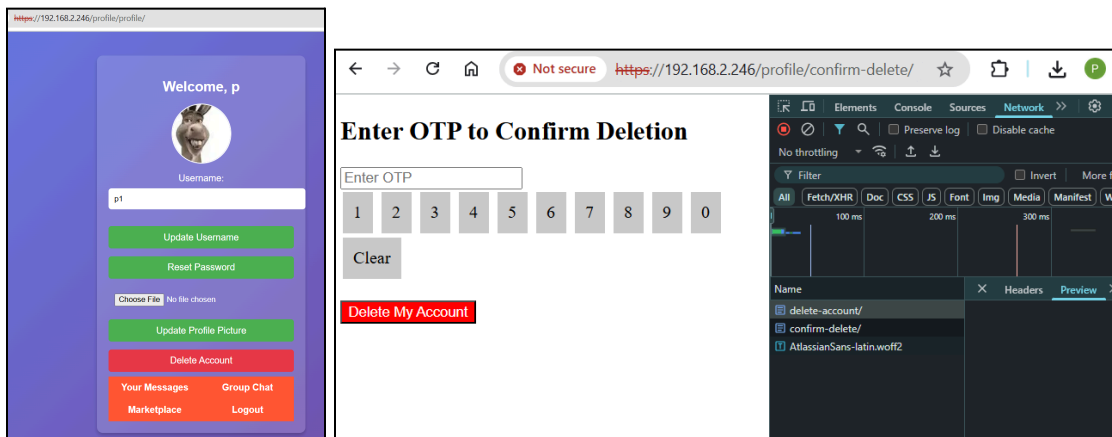

Functional

Description: No OTP was sent on the email during sensitive actions like delete account but it's required to delete a account. Same in the case of password reset.

Steps to Reproduce:

- 1) Go to the url: <https://192.168.2.246/signup/>
- 2) Login with any existing account or with a new account.
- 3) Click on delete account.
- 4) It will show to enter otp but i did not receive any otp.

Proof of Concept: I created a account p1 and clicked on delete account. Now i need to give otp but i have not received any otp at all. I got the same issue with password reset as well.

Impact:

This violates the requirement of OTP verification in deleting account and password reset.
